

# Key infrastructure investments

We're investing in the future of Te Awa Kairangi ki Tai Lower Hutt. Here are the major projects we're investing in as part of this 10 Year Plan.

**Petone Collecting Sewer**

**2024–30**

The main collecting sewer for Petone is at the end of its service life and has been assessed as being highly vulnerable. This project will deliver a replacement collecting sewer.

**Petone Recreation Ground grandstand, Library and Wharf**

**2025 onwards**

We are looking at a number of options for prioritising our investment in, and continued maintenance of these assets.

**Seaview Wastewater Treatment Plant**

**2024–35**

The Seaview Wastewater Treatment Plant is nearing the end of its service life. This project will deliver a number of critical plant system renewals including the sludge dryer, odour control systems, and UV systems. A third of the cost of this project will be paid by Upper Hutt City Council.

**Tupua Horo Nuku**

**2022–26**

Construction of a new shared path between Ma-Koromiko Windy Point and Ngāmatau Point Howard providing safer walking and cycling and construction of a new sea wall to improve the resilience of the road.

**Te Wai Takamori o Te Awa Kairangi (RiverLink)**

**2023–29**

A transformational project including flood protection work, improvements to public transport, walking & cycling and local roads, as well as urban revitalisation of our city centre.

**Eastern Hutt Road resilience**

**2023–31**

Improvements to the resilience of Eastern Hutt Road.

**Naenae pool and fitness new build**

**2020–24**

Demolition of the earthquake prone Naenae Pool and Fitness building and construction of a new Aquatic and Fitness facility.

**Eastern Hills Reservoir and Outlet Main**

**2026–29**

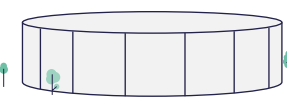

There is a water shortage in the Central Hutt water supply zone. This project will support growth on the valley floor and address the existing shortfall in water supply.

**Cross Valley connections**

**2024–32**

A new multi-modal transport corridor connecting Gracefield and State Highway 2.

**Gracefield Reservoir**

**2030–32**

The Gracefield Reservoir is in poor condition and this project will deliver a replacement reservoir. This work will occur once the new Eastern Hills reservoir has been commissioned to ensure continuity of supply.

**City-wide**

**Assessing the case and roll out of universal smart water meters**

**2024–30**

The increasing demand for water will outstrip future water supply capacity and create significant future water related infrastructure costs. Exploring options for managing the demand for water is a key component of regional council's strategy to reduce the future costs of water infrastructure.

**City-wide**

**Network Renewals**

**2024–34**

Parts of the water network are in very poor condition. This investment will focus on fixing known leaks and increasing the number of kilometres of renewed water pipes across our network.
